Fakhirazzahrah Ramadhani

Portfolio | fzzahhrahh@gmail.com | Linkedin | Makassar, Indonesia

Informatics Engineering graduate from Hasanuddin University and Bangkit Academy alumna with hands-on experience in data analysis and dashboard reporting. Skilled in SQL, Python (Pandas, scikit-learn), and Power BI (DAX, Power Query), with projects in customer segmentation, ETL pipelines (PostgreSQL, FastAPI), and machine learning-based forecasting. Gained front-end and data visualization experience as a Software Engineer Intern at PT Telkom Akses Area Sulbagsel, with a foundation in Google Cloud Platform. Passionate about turning data into clear, actionable insights for business decisions.

PROJECTS

Global Superstore Sales Dashboard

Personal Project

- Built a retail sales analytics dashboard using Power BI to identify the most profitable product categories, discount strategy effectiveness, and product return patterns across 2012-2015.
- Used DAX measures and Power Query for data transformations and modelling to support business decision making.

E-Commerce Customer Segmentation

Personal Project

- Applied RFM (Recency, Frequency, Monetary) analysis and K-Means clustering to segment e-commerce customers using Python, Pandas, and Scikit-learn.
- Identified a "Champions" segment representing only 16.4% of customers but contributing 64.9% of total revenue, providing actionable insight for targeted retention strategy.

Weather ETL & Forecasting Platform

Personal Project

- Built an end-to-end data engineering project: collecting real-time weather data, processing it through an ETL pipeline, storing it in PostgreSQL, generating temperature forecasts with machine learning, and visualizing results on a React dashboard.

SkinScan: AI-Powered Skin Cancer Detection

Mobile Application Project

- Worked in a team as a Backend and Cloud Developer to deploy services on Google App Engine, ensuring the application's backend architecture was stable and accessible for mobile users.

Collaborated within a 2- person cloud team to handle database integration and authentication, focusing on data synchronization to maintain consistent user diagnostic history

WORK EXPERIENCE

PT Telkom Akses Area Sulbagsel — **Indonesia**

Software Engineer Intern — Sept 2024 – Dec 2024

- Designed UI/UX in Figma and implemented front-end features in React for ARINA, a customer complaint ticketing platform, based on requirement analysis (UML/flowcharts) with the development team.
- Built data visualization components, a bar chart and a regional breakdown diagram and connected to a Firebase Realtime Database to display ticket volume trends by month and by location.
- Implemented search and filter functionality on ticket tables and integrated Firebase Authentication/Firestore for user login and signup flows.
- Participated in alpha testing to validate feature functionality and data accuracy before deployment.

EDUCATION

Hasanuddin University — **Indonesia**

Informatics Engineering — Aug 2021 – Feb 2026

- Final Project (Thesis): Implementation of FastGAN Model for Image Synthesis in the Ornithology Domain. Developed a generative model to synthesize high-resolution bird images from small datasets, applying hinge loss and skip-connections for stable convergence and high-fidelity output with lower computational cost.
- Coder Institute: Learned foundational Mobile Development using Dart (Flutter) to build basic logic and responsive interfaces, ensuring functional layouts and user-centric designs.
- GDSC Universitas Hasanuddin: Participated in various technical workshops and community events, focusing on collaborative problem solving and strengthening communication skills within the developer ecosystem.

Bangkit Academy by Google, GoTo, and Traveloka — **Indonesia**

Cloud Computing Learning Path — Feb 2024 – Jul 2024

- Completed 900+ hours of a rigorous curriculum covering Cloud Computing, Backend Development, and Professional Skills, consistently achieving top-tier performance standards throughout the program
- Completed 11+ technical courses in Google Cloud and backend development (Cloud Engineer path, Cloud Foundations, Cloud Run, Associate Cloud Engineer prep).
- Capstone / Final Project (200 hours): Cloud & Backend Developer – Supported a 2-person cloud team in managing backend services and database connectivity on Google App Engine to ensure data availability.

TECHNICAL SKILLS

- **Data Analysis:** SQL, Python (Pandas, numpy, Matplotlib), Power BI (DAX, Power Query), Excel.
- **Machine Learning:** scikit-learn, K-Means, RFM Segmentation, Time-series Forecasting, FastGAN)
- **Data Engineering:** ETL pipeline, PostgreSQL, FastAPI.
- **Cloud & Tools:** Google Cloud Platform (App Engine, Cloud Run), Firebase, Git/Github, Postman.
- **Front End:** HTML, CSS, JavaScript, TypeScript, React, Next.js, Figma.

Soft Skills
Analytical thinking, problem-solving, collaboration & teamwork, communication, adaptability, attention to detail.

Languages
Indonesian (Native), English (Professional)
